

This is a leveraged product. It is different from conventional exchange traded funds as it seeks leveraged investment results relative to the Index and only on a Daily basis.

This product is not intended for holding longer than one day as the performance of this product over a longer period may deviate from and be uncorrelated to the leveraged performance of the Index over the period.

This product is designed to be used for short term trading or hedging purposes, and is not intended for long term investment.

This product only targets sophisticated trading-oriented investors who understand the potential consequences of seeking Daily leveraged results and the associated risks and constantly monitor the performance of their holdings on a Daily basis.

This is a product traded on the exchange.

This statement provides you with key information about this product.

This statement is a part of the Prospectus.

You should not invest in this product based on this statement alone.

Quick facts

| | |
|--|---|
| Stock code: | 7266 |
| Trading lot size: | 100 Units |
| Manager: | CSOP Asset Management Limited 南方東英資產管理有限公司 |
| Trustee: | Cititrust Limited |
| Registrar: | Computershare Hong Kong Investor Services Limited |
| Ongoing charges over a year [#] | 3.00% (0.012%) |

[#] The ongoing charges figure represents the sum of the ongoing expenses chargeable to the Product expressed as a percentage of the Product's NAV. The Manager will cap the ongoing charges figure for the Product at a maximum of 3% p.a. ("OCF Cap"). This means that any expense of the Product (falling within the scope of ongoing expenses) incurred during this period will be borne by the Manager and will not be charged to the Product if such expense would result in the ongoing charges figure exceeding the OCF Cap.

^{*} The annual average daily ongoing charges figure is equal to the ongoing charges figure over the year divided by the number of dealing days during that year. This figure may vary from year to year.

^{##} This is the actual tracking difference of the last calendar year. Investors should refer to the ETF website for more up to date information on

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

(annual average daily ongoing charges*):

Annual average daily tracking difference^{###}: -0.01%

Index: NASDAQ-100 Index (the “Index”)

Base currency: US dollars (USD)

Trading currency: Hong Kong dollars (HKD)

Financial year end: 31 December

Dividend policy: Annually in December subject to the Manager’s discretion. Distributions may be paid out of capital or effectively out of capital. **All Units will receive distributions in the base currency (USD) only.**

Website: <https://www.csopasset.com/en/products/l-2xndx>

What is this product?

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product (the “Product”) is a sub-fund of CSOP Leveraged and Inverse Series II, an umbrella unit trust established under Hong Kong law. Units of the Product (the “Units”) are traded in HKD on The Stock Exchange of Hong Kong Limited (the “SEHK”) like stocks. It is a futures-based product which invests directly in the nearest quarter E-Mini NASDAQ 100 Futures (“E-mini NASDAQ 100 Futures”) which are traded on the Chicago Mercantile Exchange (“CME”) so as to give the Product twice (2x) the Daily performance of the Index. The E-mini NASDAQ 100 Futures offer liquid benchmark contracts to manage exposure to the constituents of the Index. It is denominated in USD. Creations and redemptions are in USD only.

Objective and investment strategy

Objective

The investment objective of the Product is to provide investment results that, before fees and expenses, closely correspond to twice (2x) the Daily performance of the Index. **The Product does not seek to achieve its stated investment objective over a period of time greater than one day.**

“Daily” in relation to the leveraged performance of the Index or the performance of the Product, means the leveraged performance of the Index or the performance of the Product (as the case may be) from the close of market of a given Business Day until the close of the market on the subsequent Business Day.

Strategy

To achieve the investment objective of the Product, the Manager will adopt a futures-based replication strategy through investing directly in the nearest quarter E-mini NASDAQ 100 Futures subject to the rolling strategy discussed below, to obtain the required exposure to the Index.

In entering into the E-mini NASDAQ 100 Futures, the Manager anticipates that no more than 40% of the Net Asset Value of the Product (the “NAV”) from time to time will be used as margin to acquire the E-mini NASDAQ 100 Futures. Under exceptional circumstances (e.g. increased margin requirement by the exchange in extreme market turbulence), the margin requirement may increase substantially.

Not less than 60% of the NAV (this percentage may be reduced proportionately under exceptional circumstances where there is a higher margin requirement, as described above) will be invested in

actual tracking difference.

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

cash (USD) and other USD denominated investment products, such as deposits with banks in Hong Kong and USD denominated short-term investment-grade bonds (i.e. maturity less than 3 years) and money market funds in accordance with the requirements of the Code.

No more than 10% of the Net Asset Value may be invested in collective investment scheme which may be eligible schemes (as defined by the SFC) or authorised by the SFC in accordance with all the applicable requirements of the Code. For the avoidance of doubt, the Product's investment in the money market funds mentioned in the preceding paragraph is not subject to this limit. Any investments in ETFs will be considered and treated as collective investment schemes for the purposes of and subject to the requirements in 7.11A and 7.11B of the Code.

Daily rebalancing

The Product as a leveraged product will rebalance its position on a day when the SEHK, the CME and the NASDAQ are open for trading (i.e. a Business Day). At or around the close of the trading of the E-mini NASDAQ 100 Futures on each Business Day, the Product will seek to rebalance its portfolio, by increasing exposure in response to the Index's Daily gains or reducing exposure in response to the Index's Daily losses, so that its Daily leverage exposure ratio to the Index is consistent with the Product's investment objective.

Futures roll

The Manager will use its discretion to carry out the roll-over of the nearest quarter E-mini NASDAQ 100 Futures into next quarter E-mini NASDAQ 100 Futures with the goal that, by one Business Day before the last trading day of the nearest quarter E-mini NASDAQ 100 Futures, all roll-over activities would have occurred. The roll will occur within a 8-calendar days period in the last calendar month of each quarter (between 8 calendar days before the last trading day of the nearest quarterly E-mini NASDAQ 100 Futures and one business day before the last trading day of the nearest quarterly E-mini NASDAQ 100 Futures). The Manager has full discretion of futures rolling execution to meet the Product's investment objective.

Index

The Index is a price return index which includes 100 of the largest non-financial companies listed on the NASDAQ Stock Market based on market capitalisation. It is denominated in USD. The Index began on 31 January 1985 at a base value of 125.00, as adjusted. The Manager and its connected persons are independent of NASDAQ, Inc., the index provider of the Index.

As at 14 March 2023, the Index had a total market capitalisation of USD14.15 Trillion and 101 constituents (issued by 100 companies).

The constituents of the Index and their respective weightings are published at <https://business.nasdaq.com/intel/indexes/research/nasdaq-global-index-policies/index.html>. You can obtain additional information of the Index including the index methodology and the closing level of the Index from www.nasdaq.com. (These websites have not been reviewed or approved by the SFC.)

Bloomberg Code: NDX

Use of derivatives / investment in derivatives

The Product's net derivative exposure may be more than 100% of the Product's Net Asset Value.

What are the key risks?

Investment involves risks. Please refer to the Prospectus for details including as to the risk factors.

1. Investment risk

- The Product is a derivative product and is not suitable for all investors. There is no guarantee of the repayment of principal. Therefore your investment in the Product may suffer substantial or total losses.

2. Leverage risk

- The Product will utilise leverage to achieve a Daily return equivalent to twice (2x) the return of the Index. Both gains and losses will be magnified. The risk of loss resulting from an investment in the Product in certain circumstances including a bear market will be substantially more than a fund that does not employ leverage.

3. Long term holding risks

- **The Product is not intended for holding longer than one day** as the performance of the Product over a period longer than one day will very likely differ in amount and possibly direction from the leveraged performance of the Index over that same period (e.g. the loss may be more than twice the fall in the Index).
- The effect of compounding becomes more pronounced on the Product's performance as the Index experiences volatility. With higher Index volatility, the deviation of the Product's performance from the leveraged performance of the Index will increase, and the performance of the Product will generally be adversely affected.
- As a result of Daily rebalancing, the Index's volatility and the effects of compounding of each day's return over time, it is even possible that the Product will lose money over time while the Index's performance increases or is flat.

4. Risk of rebalancing activities

- There is no assurance that the Product can rebalance its portfolio on a Daily basis to achieve its investment objective. Market disruption, regulatory restrictions or extreme market volatility may adversely affect the Product's ability to rebalance its portfolio.

5. Liquidity risk

- The rebalancing activities of the Product typically take place near the end of trading of the underlying futures market to minimise tracking difference. As a result, the Product may be more exposed to the market conditions during a shorter interval and may be more subject to liquidity risk.

6. Intraday investment risk

- The Product is normally rebalanced at or around the close of the E-mini NASDAQ 100 Futures on each Business Day. As such, return for investors that invest for period less than a full trading day will generally be greater than or less than two times (2x) the leveraged investment exposure to the Index, depending upon the movement of the Index from the end of one trading day until the time of purchase.

7. Portfolio turnover risk

- Daily rebalancing of Product's holdings causes a higher level of portfolio transactions than compared to the conventional exchange traded funds. High levels of transactions increase brokerage and other transaction costs.

8. Futures contracts risks

- Investment in futures contracts involves specific risks such as high volatility, leverage, rollover and margin risks. There may be imperfect correlation between the value of the underlying reference

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

assets and the futures contracts, which may prevent the Product from achieving its investment objective.

- A “roll” occurs when an existing E-mini NASDAQ 100 Future is about to expire and is replaced with another E-mini NASDAQ 100 Future with a later expiration date. The value of the Product's portfolio (and so the NAV per Unit) may be adversely affected by the cost of rolling positions forward as the E-mini NASDAQ 100 Futures approach expiry. This effect may be more pronounced in products with higher leverage ratio.
- An extremely high degree of leverage is typical of a futures trading account. As a result, a relatively small price movement in an E-mini NASDAQ 100 Future may result in a proportionally high impact and substantial losses to the Product, having a material adverse effect on the NAV. A futures transaction may result in significant losses in excess of the amount invested.

9. Difference in price limit risk

- The daily price limit for the NASDAQ (which is triggered when the price of the S&P 500 Index drops 20% in a day) and the daily price limit for the E-mini NASDAQ 100 Futures (which may be triggered by 7%, 13%, 20% declines or 5% up and down changes of the price of the E-mini NASDAQ 100 Futures, depending on the time of the day) are different, as they are triggered at different price changes. As such, should the Index's daily price movement be greater than the price limit of the E-mini NASDAQ 100 Futures, the Product may not be able to achieve its investment objective as the E-mini NASDAQ 100 Futures are unable to deliver a return beyond their price limit.

10. Concentration risk, US markets risk and NASDAQ-100 constituents risk

- The Product is subject to concentration risks as a result of tracking the leveraged performance of companies from the technology sector and its concentration in the US market which may be more volatile than other markets. The value of the Product may be more volatile than that of a broadly-based fund.
- Companies in the technology sector are often smaller, and are characterised by relatively higher volatility in price performance when compared to other economic sectors. Companies in the technology sector also face intense competition which may have an adverse effect on profit margins. Investment in NASDAQ constituents may therefore be more volatile. The price volatility of constituents of the Index may be greater than the price volatility constituents of more broad-based indices.

11. Distributions risk

- Payment of distributions out of capital or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment and may result in an immediate reduction in the NAV per Unit.

12. Passive investments risk

- The Product is not “actively managed” and the Manager will not adopt any temporary defensive position when the Index moves in an unfavourable direction. In such circumstances, Units of the Product will also decrease in value.

13. Trading risks

- The trading price of the Units on the SEHK is driven by market factors such as the demand and supply of the Units. Units may trade at a substantial premium or discount to the NAV.
- As investors will pay certain charges (e.g. trading fees and brokerage fees) to buy or sell Units on the SEHK, investors may pay more than the NAV per Unit when buying Units on the SEHK, and may receive less than the NAV per Unit when selling Units on the SEHK.

14. Trading time differences risk

- As the CME may be open when Units in the Product are not priced, the value of the E-mini NASDAQ 100 Futures in the Product's portfolio, or the value of constituents in the Index to which such futures contracts are linked, may change on days when investors will not be able to purchase or sell the

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

Product's Units. Differences in trading hours between the CME and the SEHK may increase the level of premium/discount of the Unit price to its NAV.

- The NASDAQ and the CME have different trading hours. Trading of the Index constituents closes earlier than trading of the E-mini NASDAQ 100 Futures, so there may continue to be price movements for the E-mini NASDAQ 100 Futures when Index constituents are not trading. There may be imperfect correlation between the value of the Index constituents and the E-mini NASDAQ 100 Futures, which may prevent the Product from achieving its investment objective.

15. Reliance on market maker risk

- Although the Manager will use its best endeavours to put in place arrangements so that at least one market maker will maintain a market for the Units and gives not less than three months' notice prior to termination of the market making arrangement, liquidity in the market for the Units may be adversely affected if there is only one market maker for the Units. There is also no guarantee that any market making activity will be effective.

16. Tracking error and correlation risks

- The Product may be subject to tracking error risk, which is the risk that its performance may not track that of the Daily leveraged performance of the Index exactly. This tracking error may result from the investment strategy used, high portfolio turnover, liquidity of the market and fees and expenses and the correlation between the performance of the Product and the two times (2x) Daily performance of the Index may be reduced. The Manager will monitor and seek to manage such risk in minimising tracking error. There can be no assurance of exact or identical replication of the leveraged performance of the Index at any time, including on an intra-day basis.

17. Volatility risk

- Prices of the Product may be more volatile than conventional ETFs because of the daily rebalancing activities and the leverage effect.

18. Termination risk

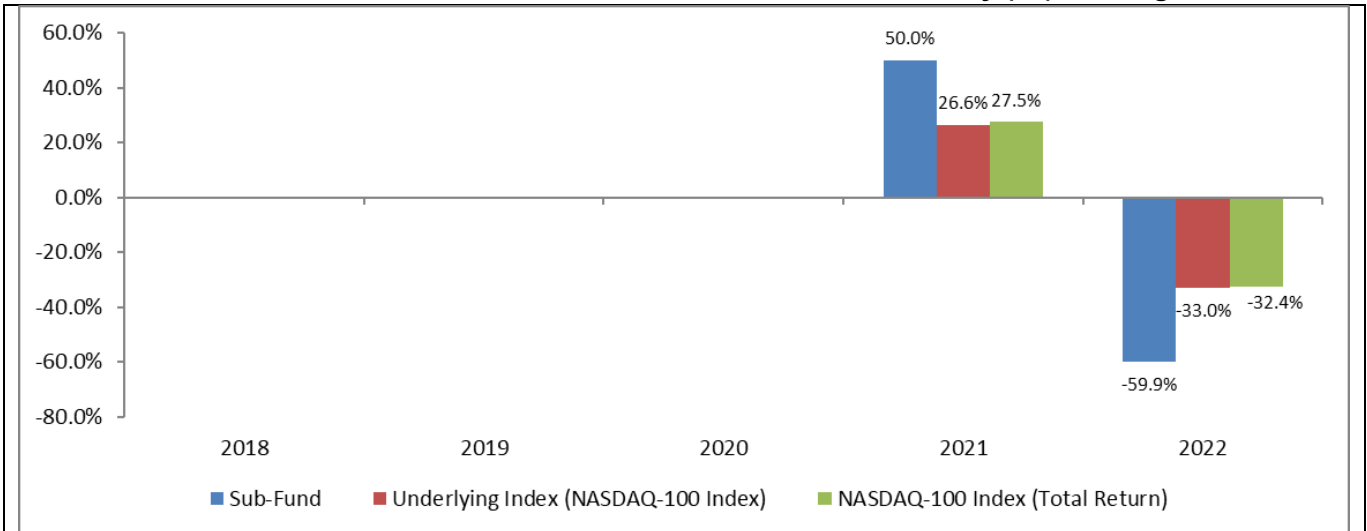

- The Product may be terminated early under certain circumstances, for example, where there is no market maker, the Index is no longer available for benchmarking or if the size of the Product falls below USD10 million. Investors may not be able to recover their investments and suffer a loss when the Product is terminated.

19. Other currency distributions risk

- Investors should note that all Units will receive distributions in the Base Currency (USD) only. In the event that the relevant Unitholder has no USD account, the Unitholder may have to bear the fees and charges associated with the conversion of such distribution from USD to HKD or any other currency. The Unitholder may also have to bear bank or financial institution fees and charges associated with the handling of the distribution payment. Unitholders are advised to check with their brokers regarding arrangements for distributions.

How has the Product performed?

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested.
- These figures show by how much the Product increased or decreased in value during the calendar year being shown. Performance data has been calculated in USD taking into account ongoing charges and excluding your trading costs on SEHK.
- Where no past performance is shown there was insufficient data available in that year to provide performance.
- Fund launch date: 15 May 2020.

Is there any guarantee?

The Product does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?

Charges incurred when trading the Product on the SEHK

| Fee | What you pay |
|---|--|
| Brokerage fee | Market rate |
| Transaction levy | 0.0027% ¹ of the trading price |
| Accounting and Financial Reporting Council (“AFRC”) transaction levy | 0.00015% ² |
| Trading fee | 0.00565% ³ of the trading price |
| Stamp duty | Nil |

¹ Transaction levy of 0.0027% of the trading price of the Units payable by each of the buyer and the seller.

² AFRC transaction levy of 0.00015% of the trading price of the Units, payable by each of the buyer and the seller.

³ Trading fee of 0.00565% of the trading price of the Units, payable by each of the buyer and the seller.

Ongoing fees payable by the Product

The following expenses will be paid out of the Product. They affect you because they reduce the NAV of the Product which may affect the trading price.

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

| | Annual rate (as a % of NAV) |
|---------------------------|--------------------------------|
| Management fee* | 1.50% |
| Trustee fee | Included in the management fee |
| Performance fee | Nil |
| Administration fee | Included in the management fee |

** Please note that the management fee may be increased up to a permitted maximum amount by providing one month's prior notice to Unitholders. Please refer to the section headed "Fees and Expenses" in the Prospectus for further details of the fees and charges payable and the permitted maximum of such fee allowed, as well as other ongoing expenses that may be borne by the Product.*

Other fees

You may have to pay other fees when dealing in the Units of the Product. Please refer to the Prospectus for details.

Additional information

The Manager will publish important news and information with respect to the Product (including in respect of the Index), in the English and Chinese languages (unless otherwise specified), on the Manager's website at <https://www.csopasset.com/en/products/l-2xndx> (which has not been reviewed or approved by the SFC) including:

- (a) the Prospectus and this statement (as revised from time to time);
- (b) the latest annual accounts and half-yearly unaudited report (in English only);
- (c) any notices relating to material changes to the Product which may have an impact on Unitholders such as material alterations or additions to the Prospectus or the Product's constitutive documents;
- (d) any public announcements made by the Product, including information with regard to the Product and Index, notices of the suspension of the calculation of the NAV, suspension of creation and redemption of Units, changes in fees, and the suspension and resumption of trading;
- (e) the near real time indicative NAV per Unit updated every 15 seconds during SEHK trading hours in HKD;
- (f) the last NAV of the Product in USD and the last NAV per Unit in USD and in HKD;
- (g) the past performance information of the Product;
- (h) the daily tracking difference, the average daily tracking difference and the tracking error of the Product;
- (i) full portfolio information of the Product (updated on a Daily basis);
- (j) a "performance simulator" which allows investors to select a historical time period and simulate the performance of the Product vis-à-vis the Index during that period based on historical data;
- (k) the latest list of the participating dealers and market makers; and
- (l) compositions of dividends (i.e. the relative amounts paid out of (i) net distributable income and (ii) capital), if any, for a rolling 12-month period.

The near real-time indicative NAV per Unit in HKD and the last NAV per Unit in HKD are indicative and for reference purposes only. The near real-time indicative NAV per Unit in HKD uses a real-time HKD:USD foreign exchange rate – it is calculated using the near real-time indicative NAV per Unit in

CSOP NASDAQ-100 Index Daily (2x) Leveraged Product

USD multiplied by a real-time HKD:USD foreign exchange rate provided by ICE Data Indices when the SEHK is opened for trading.

The last NAV per Unit in HKD is calculated using the last NAV per Unit in USD multiplied by an assumed foreign exchange rate using the HKD:USD exchange rate quoted by Reuters at 3:00 p.m. (Hong Kong time) as of the same Dealing Day. Since the indicative NAV per Unit in USD will not be updated when the CME is closed, any change in the indicative NAV per Unit in HKD (if any) during such period is solely due to the change in the foreign exchange rate. The last NAV per Unit in USD and HKD will be updated on days when the SEHK is open for trading, but will not be updated when the CME is closed.
