Response to Climate Crisis

In the context of global response to climate change and the "zero-carbon change" scenario driven by relevant policies and markets in China, enterprises play a vital role as the main source of greenhouse gas emissions and an important part of the "carbon neutrality" plan. Redsun Properties always pays attention to the issues related to climate change and attaches great importance to the negative impact of climate crisis on the industry. During the Reporting Period, we followed the guidance and recommendations of TCFD (Task Force on Climate-related Financial Disclosures) to identify the physical risks and transition risk factors that will have an impact on the Group's production and operation activities based on the comparative scenarios under the two typical greenhouse gas concentration pathways (RCP 2.6 and RCP8.5), and formulated and updated effective measures in a targeted manner to guide the Company to respond to climate change risks in a more powerful and orderly manner and provide a solid guarantee for sustainable development.

As part of this initiative, the organizational structure was adjusted, reducing the previous regions from Nanjing, Xuzhou, Suzhou, Wuhan, Chengdu, Weifang, and Guangzhou-Foshan to Nanjing, Xuzhou, and Wuhan regions. Additionally, the consolidation of regions led to the closure of many offices, resulting in significant fluctuations in data.
